(54) Title: SYSTEM AND METHODS FOR STORING AND PRESENTING PERSONAL INFORMATION

(57) Abstract: A user can interact with a portable device (10, 10A) to store and receive information using a voice-driven interface. Single utterance spoken commands can be used to perform functions such as making calendar entries, generating reminders, generating ToDo items and the like. A portable device (10, 10A) may automatically identify devices which are nearby at the time of an event and store a list of those other devices. Speech recognition and speech synthesis may be performed at a computer system which is remote from the portable device. The portable device may be in only sporadic communication with the computer system.
